

Solar Thermal Heating: Financial & Environmental Sense

What about payback?

With a payback of 3 to 6 years (depending on your home and the system you choose) and a life expectancy of 20 to 30 years, a solar heating & hot water system by RES is a sensible financial investment in any economy.

Once your system is installed, you begin to realize the benefits immediately. And the higher the cost of fossil fuel goes, the more you save!

Are there other benefits?

Definitely! You become your own mini-utility company, so you're much more self-sufficient and protected from volatile fossil fuel market price fluctuations.

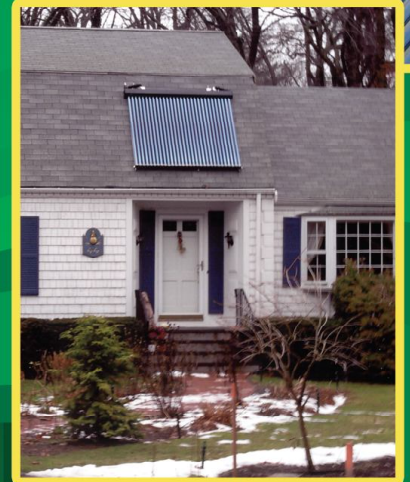

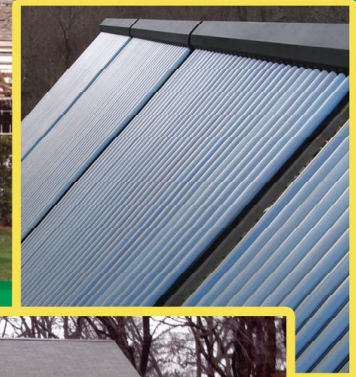

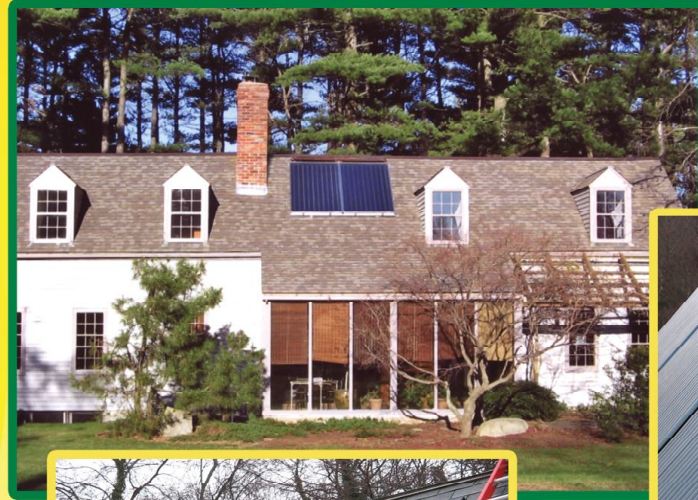

And solar heating is one of the cleanest of all energy systems available, improving your own family's health while helping to reduce greenhouse gas emissions.

You're also adding home equity value and giving your home a distinct market advantage if you should ever decide to sell your home.

Why should I choose RES for my solar heating & hot water system?

We provide you with a comprehensive site analysis, we handle all of the permitting, and then we design and install the perfect system for your home and budget.

We use only the highest quality SEC Certified solar components including stainless steel tanks and Apricus evacuated tubes.
